at 9:30 !virtualbox Virtualbox is a virtualizer for x86 and amd64 architectures. It's available in the package "virtualbox" in the!repositories, and you can download the Virtualbox Extension Pack for additional, non-Free functionality at Additional details can be found at pietroppe booting from a usb stick? The tool which installed the system did not have it's own storage as far as I know, since I had to manually configure some stuff for it to work. MonkeyDust: yes cfhowlett: It's no longer in the ubuntu repos, but I might be wrong. MonkeyDust: I cannot find another way to install Ubuntu beside the liveCD pietroppe, download the.iso and burn it to a disk cfhowlett: kostkon: I have, I've used it before on many different PC's without problems pietroppe, ok pietroppe it's not possible to boot a usb stick pietroppe ask in #linux MonkeyDust: in the bios? Oh yes, I have virtualbox installed on my computer - and if I don't have the extension pack I can't access my files from the VM. _Sponge, its still in the repos sudo apt-get install virtualbox-guest-utils MonkeyDust: it's a laptop, not a netbook nishtal2: Oh, I'm silly. Sorry. :) pietroppe ok, what was the other way? MonkeyDust: Installing Ubuntu 82157476af
